Case DNA™: Many documents, one case

You have one case to focus on, but hundreds of documents connected to it. Unlike classic case management tools requiring huge efforts for organization, Case DNA™ enables you to automatically extract information, collect legal facts, visualize how they refer to your case, suggest similar cases, create a Mindmap of your case and generate reports.

Advanced Case Analytics

Visualization creates new information. Juritool™ provides you with cutting edge legal analytics tools producing visual maps of the content and enhancing your understanding of the case. With the Opinion Centrality tool, you will be able to see how your case connects to past cases, at a glance. You can identify the landmark case law and the opinions that can be cited.

With the Risk Analysis tool, you will be able to analyse the outcome of similar cases and predict your chance of winning, losing or reaching a settlement. Before you go to Court.

Precise and Intelligent Search

With Juritool™ you will be able to search the Juritool™ database, your documents and the internet. By selecting jurisdictions, document source and categories you can focus your research and make it faster. The intelligent search algorithm of Juritool™ tunes your search by applying artificial intelligence technology. You find exactly what you need.

Standard
\$ **70**

User/Month

Features
